PRODUCT APPLICATION PRESENTATION

PRODUCT IDENTIFIER:
PROCESS IDENTIFIER:

T C I 3 0 1 - 5 0 H. D.™
CLINKER, CEMENT, LIME, RUST, SCALE & CONCRETE REMOVER

PRODUCT INTRODUCTION:

TCI 301-50 H.D. is a ready to use complex liquid formulation of environmentally friendly acids with unique fume suppressants and stable biodegradable wetting agents. TCI 301-50 H.D. is inhibited against metal substrate corrosion by 99.9%.

PACKAGING: 25, 205 LITRES

PROCESS INTRODUCTION:

TCI 301-50 H.D. formula effectively removes light-heavy deposits of residual cement, concrete, mortar, rust, scale, lime, drywall compound, stucco and plaster with minimal time and effort.

It is designed for the construction industry to clean equipment used in hauling cement, on-site process mixers, ready-mix trucks and chutes. It is used for the clean-up of splatter, tools, forms, wheelbarrows etc.

PRECAUTIONARY NOTES:

Do not let any chemical solution dry on any surface (concentrates may cause irreparable damage), be careful to protect people, plants and animals, stationary and mobile property from wind drift.

Accessories on finished products, such as light assemblies, reflectors, glass & mirrors, plastics, brass, stainless steel, hard chrome, decals, logos, wood, tarps, mud flaps or rubber tires are not altered or defaced by this chemical solution when used according to directions.

APPLICATION PROCEDURE:

THIS PROCEDURE IS FOR TRAINED PERSONNEL ONLY

SMALL TOOLS MANUAL CLEANING METHOD: For cleaning of small tools in the maintenance shop or off-site use a plastic pail or tray and brush. Pour the remaining liquid back into the original shipping container.

LARGE TOOLS AND EQUIPMENT CLEANING METHOD: To start the cleaning process, set up the manufacturer's approved "CHEMICAL APPLICATOR SYSTEM" and regulate the operating air pressure to 340-400 kPa (50-60 psi). The system draws the cleaner directly from the shipping container and delivers it through a variable length discharge hose directly to the dirty equipment without the cleaning crew having to handle or come in close proximity with the hazardous product. The pump will start and stop automatically by controlling the flow on demand at the shut-off valve on the applicator wand.

CAUTION: Do not spray TCI 301-50 H.D. directly onto a hot surface since it will result in stains or damage.

Use a pressure washer and walk around the whole unit being treated and thoroughly cool and wet the entire surface on a hot sunny day or any other time. The best time is early in the morning or evenings or in a controlled environment. Now apply the chemical solution as a spray to the entire body starting from the top and working down. Assure complete thin film coverage. Once the application is complete, re-apply the product to the remaining heavy encrustations and allow approximately a 5 minute chemical exposure time. Exposure time is directly proportional to soil thickness. Brushing is optional.

Rinse the entire body with high pressure (2500-3000psi) cold water starting at the bottom and consistently moving with a 10 cm fan or less in a horizontal pattern until the top is reached. Then rinse all residual chemical solution thoroughly from the top down. It is recommended to use the down stream chemical injection device on the power washer ie. TCI 710 H.D. to neutralize excess acid on the equipment and to control the pH of ground contamination, storm and sanitary sewer systems. This cleaning process does not generate a hazardous waste.

CAUTION: DO NOT LET ANY CHEMICAL DRY ON THE SURFACE (WIND DRIFT CHEMICAL SPRAY IS A POTENTIAL DANGER)
ie. CONCENTRATED CHEMICAL WITHOUT WATER MAY STAIN SURFACES IF NOT RINSED

PLEASE CALL OUR TECHNICAL SUPPORT LINE @ 1-888-658-5515 FOR SOLUTIONS TO YOUR INDUSTRY.
